

Global Coffee Market Report — Q3 Overview

Executive Summary

Global green coffee production is estimated to reach 175 million 60-kilogram bags this season, a modest increase from the prior year driven by favorable weather in Brazil's Minas Gerais region. Robusta prices have remained elevated due to persistent supply constraints out of Vietnam, while Arabica prices have softened slightly on improved harvest expectations. Roasters in North America and Europe report continued pressure on margins as input costs remain above five-year averages.

Production by Country (Estimated, Million 60kg Bags)

Country	This Season	Prior Season	Change (%)
Brazil	66.0	63.4	+4.1%
Vietnam	27.5	29.2	-5.8%
Colombia	12.6	11.9	+5.9%
Indonesia	10.2	10.5	-2.9%
Ethiopia	8.1	7.8	+3.8%
Honduras	5.9	5.7	+3.5%

Price Trends

Arabica futures settled the quarter near 1.82 USD per pound, down from 2.05 USD at the start of the period. Robusta futures held closer to 1.15 USD per pound, supported by tight Vietnamese inventories and continued demand from instant coffee manufacturers. Currency movements in producing countries, particularly the Brazilian real, added volatility to dollar-denominated pricing throughout the quarter.

Consumption Trends

Specialty coffee continues to outgrow the broader category, with cold brew and ready-to-drink formats posting the strongest volume growth among surveyed retailers. Certified sustainable coffee, including Rainforest Alliance and Fairtrade labeled products, now accounts for an estimated 25 percent of retail shelf volume in Western Europe, up from 19 percent five years ago.

Outlook

Analysts expect Arabica prices to stabilize in the coming quarter absent major weather disruptions, while Robusta is likely to remain firm until the next Vietnamese harvest reaches export markets. Climate volatility remains the dominant long-term risk factor cited by industry forecasters, with several major producing regions projected to see reduced climatic suitability for coffee cultivation over the next two decades.
